

Intheairnet Airborne Movie & Audio System

AMAS Works Like Top End Home Systems + More

The Airborne Movie & Audio System (AMAS) consists of an Entertainment Controller (EC) and Video File Server (VFS). This combination allows users to experience movies and music on demand with our intuitive user friendly interface. Simply place your DVD or CD into the EC, the content is automatically imported and stored digitally. Upon successful importation of content, the DVD or CD is never needed again.

Main Menu

The Main Menu consists of links required to perform the desired tasks. The defaults are:

- Satellite TV
- Music
- Paxmap
- Aircraft Info
- Media Management
- Shut Down

Music

Music consists of a list of available audio content. Users can select from a list of Genres, Artists, or Playlists, and broadcast the content to a selected channel.

Paxmap

Paxmap consists of a selection of icons representing each available map view or users can select auto shuffle to cycle through all views.

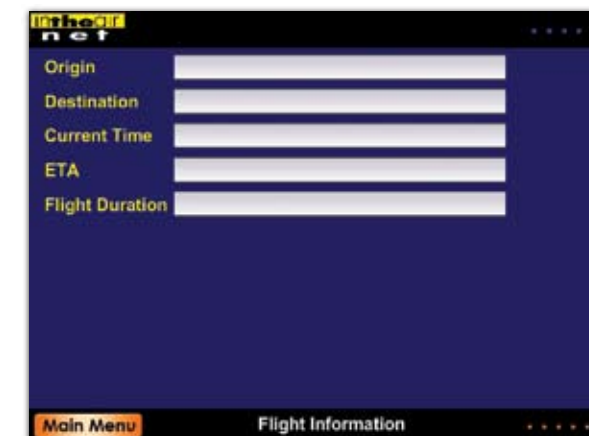

AMAS Loads Content at the Touch of a Button

Intheairnet EC will load your movies and music through an on-board reader, or a portable hard drive. You have the ability to input the Title, Genre, Artist, Date, and Rating. This is accomplished by inserting the DVD/CD directly into the reader and then having the choice of storing on the included hard drive or connecting to a Video File Server (VFS) which holds up to 200 movies per VFS. Music and movies are transferred in real time.

Aircraft Info

Aircraft Info consists of information gathered from the FMS providing information such as Origin, Destination, Current Time, ETA, Duration, etc.

Media Management/Video

Video allows the user to load, edit, transfer or delete video content located on any of the available media devices.

Media Management/Audio

Video allows the user to load, edit, transfer or delete audio content located on any of the available media devices.

EC

EC Features

The Entertainment Controller is a data loader and control panel device that can be used in conjunction with the Video File Server (VFS) or other peripherals that are controlled via an Ethernet interface. The EC consists of a wall or bulkhead mountable unit, a DVD-R and facility for mounting a removable HDD. The EC is designed to mount in the Video Control Center (VCC) or a Bag Bin location.

- Touch screen 10.4" diagonal, active matrix LCD with touch screen
- System On/Off Control (software control, password or card protected)
- Credit Card Reader (3-track slide reader)
- 115VAC power supply to supply all necessary DC voltages
- DVD/CD Drive
- Removable Hard Drive
- Access door that covers the DVD-R, Removable Hard Drive, Ethernet and Two USB ports
- Gigabit Ethernet Port for upload/download and maintenance
- Gigabit Ethernet Port for connection to the aircraft IFES network
- Size: 11.30"H x 12.80"W x 2.95"L
- Weight: 8.5 lbs.
